

TODO

Step 1

- ☒ Read repo context and locate relevant UI strings for Login/Register.

Step 2

- ☐ Update Login page text/CTA to match requested copy:
 - "Manage orders and shop faster" (already exists on mobile)
 - "with your Xontrix account" (ensure correct copy placement)
 - Replace "Wala pang account?" CTA styling to "black text" and ensure hover keeps it black.

Step 3

- ☐ If there are other instances of "Wala pang account?" or related CTA, update them consistently.

Step 4

- ☐ Run `npm test` / `npm run build` to verify TypeScript compiles.
