Project Title:	Xontrix: Integrated Electronics E-Commerce & AI-Powered Business Management Platform
Student Name:	1. Mamaril, Jayson Cris L.
	2. Peñamora, Cielle Mae C.
	3. San Luis, Ghani Regina Gold B.

Summary	This proposal outlines the design, development, and launch of a customized web platform for Xontrix, an electronics business offering microcontrollers, sensors, and other components. The platform will feature a user-friendly online store where customers can browse products, view specifications, and make secure purchases. It will include an integrated inventory management system for real-time stock monitoring and a financial tracking module to manage sales, revenue, and expenses. Additionally, AI-powered analytics will provide insights into customer behavior, sales trends, and demand forecasting to support better business decisions.
Project Goals and Objectives	The primary goals of the website project are: ● Online Store & Product Catalog: Build a fully functional e-commerce platform where customers can browse, order, and purchase electronic products (microcontrollers, sensors, and components). ● Inventory Management: Enable the client to manage and monitor product inventory levels, stock alerts, and product listings directly from a management dashboard. ● Financial Tracking & Business Insights: Track income and expenses, monitor cash flow, and identify best-selling products. View financial performance at a glance. ● AI-Powered Sales Predictions: Use AI to predict sales trends, forecast revenue per week or per month, and alert the client when sales are rising or declining.
Project Scope	1. Design & Development Phases: Phase 1: Discovery & Planning ● Requirement gathering (client discussions, competitor analysis, and goal setting) ● Project timeline development ● Initial wireframes and mockups

	Phase 2: Design & User Experience ● Custom website design based on client feedback ● UX/UI design for optimal user interaction ● Mobile-first approach Phase 3: Website Development ● Frontend development (HTML5, CSS3, JavaScript) ● Backend development (if applicable, CMS integration such as WordPress, Shopify, etc.) ● Responsive design implementation Phase 4: Content Integration & SEO Optimization ● Content creation/placement (provided by the client or created by us) ● On-page SEO optimization ● Image and media optimization Phase 5: Testing & Quality Assurance ● Cross-browser testing (Chrome, Firefox, Safari, Edge) ● Device testing (mobile, tablet, desktop) ● Performance and speed optimization Phase 6: Launch & Post-Launch Support ● Website deployment to live server ● CMS training (if required) ● Ongoing technical support for 30 days post-launch 2. Features & Functionality: ● Online Store / E-Commerce (Electronics Products) ● Inventory Management Dashboard ● Financial Tracker (Income, Expenses, Cash Flow) ● AI Sales Prediction & Analytics (Weekly/Monthly Forecasts) ● AI-Powered Customer Inquiry Chatbot ● Responsive Design (Desktop, Tablet, Mobile)
